# Profile

M.A. in Digital Humanities graduate with a background in archival research, text analysis,and data visualization .Skilled at building different digital humanities and humanities computing projects. Experienced in TEI encoding, network analysis,GIS mapping and chronological study of history.A content creator with interest to create content on diverse subjects and genres.Knows many programming languages and has a strong command over coding and programming .Knowledge of diverse tools and digital humanities methods.

My Google Drive link(for articles and write-ups):
https://drive.google.com/drive/folders/16xLGlPBZKXGhSYAHdpmM2NNLoVyUMoe4?usp=drive_link

# Skills

**Languages & Tools:** R,Python, XML/XSLT, TEI encoding, HTML/CSS,SQL

**Platforms**: QGIS,Omeka S, ArcGIS StoryMaps,Gephi,voyant tools ,graphic design (Adobe Creative Suite: Photoshop, Illustrator, InDesign), photography techniques (composition, lighting, basic editing).

**Methods:** GIS mapping**,**Text mining & topic modeling, or,network analysis.

**Frameworks:**React,Angular,Node.js,Express,Spring Boot,Django

**Cloud & Infrastructure:**Google cloud platforms,AWS,Azure,Firebase,Terraform

**Dev Practices:**Agile,,Kanban,Test-Driven Development(TDD),Continuous Integration

# Professional Experience

Infinity Learn|Academic Counselor |27July 2026-10 August 2026

# Education

| | | | |
|---|---|---|---|
| **Master of Arts in Digital Humanities** | Indian Institute of Technology ,Indian School of Mines,Dhanbad | OGPA=6.02 | 22 /07/ *2024 – 22 /07/2026* |
| ***Bachelor of Technology in Electrical Engineering*** | *National Institute of Technology,Agartala* | *CGPA=6.28* | *27/07/2015 – 28 /07/ 2019* |

Master's Thesis: "Gen AI -Acceptance among Indian higher education students using CB-SEM technique"
Relevant coursework: Text Encoding & TEI, Data Visualization for Humanists, GIS for Historical Research, Digital Archives & Preservation, Programming for Humanities Research (Python/R)

# SELECTED DIGITAL HUMANITIES PROJECTS

## 1. Mapping Shakespeare's Worlds: A Computational Study of Genre, Character Networks, and Place

This project applies text mining, network analysis, TEI encoding and GIS mapping to Shakespeare's complete works. Achieved how genre, power and geography are built into the language and structure of the plays. Each

method answers a different question, and together they give a layered, data-driven reading of the corpus.

## 2. Voices of the Archive: OralHistoryDigitization Project

Digitized and transcribed 150+ hours of community oral history recordings; built a searchable metadata schemausing Dublin Core and encoded transcripts in TEI-XML for long-term preservation.

## 3. Mapping the themes in American history:A GIS Narrativeof the American History

Achieved designing an interactive StoryMap using ArcGIS StoryMaps and QGIS to visualize American history themes

## 4. Text-Mining the Digitized collection of Vietnam war

Used Python (NLTK, spaCy) topic modeling and sentiment analysis to a corpus of digitized collections of Vietnam war

## 5. Building a Linked Open Data Prosopography

Imapacted a model in which network of historical figures using RDF and Wikidata Query Service was there, publishing SPARQL endpoints to enable cross institutional biographical research

## 6.3D Reconstruction of a Lost Medieval Manuscript Room

Collaborated with a special collections library to create a photogrammetry-based 3D model in Blender, paired with an annotated OmekaS exhibit for public access.

## 7.Analyzing Newspaper Coverage of Holocaust

Constructed a Voyant Tools and R-based pipeline to analyze across 40 years of digitized newspaper archives from holocaust time newspapers

## 8. Community Memory Wiki:Participatory Local History Platform

Led design and moderation of a MediaWiki-based crowdsourced archive, developing contributor guidelines and a metadata taxonomy adopted by three local historical societies.

## 9. Encoding Marginalia: ATEI Edition of Annotated Rare Books

Produced a TEI P5-compliant digital edition capturing marginal annotations in a 17th-century rare book collection, rendered via XSLT into a public-facing web edition.

## 10.Network Analysis of a Literary Salon Correspondence Circle

Used Gephi and Python(NetworkX) to visualize letter-writing networks among members of a 20th-century literary salon, revealing previously undocumented intellectual influence patterns.

## 11. Sentiment Mapping in 19th-Century Serial Fiction — Built

a pipeline to extract and visualize sentiment arcs across serialized Dickens novels, comparing installment-level emotional pacing using Python, NLTK, pandas, matplotlib.

## 12. TEI Edition of a 17th-Century Correspondence Collection —Transcribed and encoded 30 letters in TEI/XML, including editorial notes, name/place authority linking, and manuscript apparatus

## 13. Census Data Dashboard for Local History Museum —

used D3.js,Plotly, JavaScript and Designed an interactive dashboard letting museum visitors explore 100 years of local census data by neighborhood.

## 14. Stylometric Authorship Attribution Study —Used function-word

frequency and Burrows'sDelta to test disputed authorship claims in a corpus of anonymous pamphlets by using Python, stylo (R), scikit-learn.

## 15. Rumor,print, and power — timeline tracking how specific pieces of information in

Russian revolution (Lenin's return, the July Days, the Kornilov affair) spread through newspapers and pamphlets, paired with a Voyant text-frequency analysis of period press to show shifting rhetoric.

## 16. Textual Variants Across Quarto and Folio Editions: A Digital Collation of Shakespeare's Hamlet, King Lear, and Romeo and Juliet

—Produced a TEI-XML critical edition and digital collation of variant passages across early Quarto and Folio texts, focusing on Q1, Q2, andF1 versions of Hamlet's "To be, or not tobe" soliloquy .Sourced and cross-referenced digitized early texts via the Internet Shakespeare Editions and Folger Digital Texts archives to build a scene-level comparative dataset. Visualized variant density and wording differences using Juxta Commons (CollateX) and a custom side-by-side HTML display, arguing that modern conflated editions obscure the instability of the "original" text.

## 17. Aphorism Density and Thematic Clustering in Nietzsche's Corpus

— Voyant-based word-frequency and topic-clustering analysis of aphoristic works (Human, All Too Long, Beyond Good and Evil) to map recurring themes and their evolution across his career.

## 18. Corpus-Wide Concept Mapping

— Voyant-based word-frequency and co-occurrence analysis across Aristotle's works (Organon, Nicomachean Ethics, Politics, Physics) tracing how core concepts like "cause," "form," and "virtue" shift meaning across philosophical domains.

## 19. Network of Middlemarch's interlocking plots

Middlemarch famously weaves multiple plot lines (Dorothea, Lydgate, Bulstrode, the Garths) into one social web and a Gephi network graph of character relationships and interactions across the novel — sized by frequency of interaction, colored by plot thread — to visualize how Eliot structurally unifies a novel critics call "her masterpiece of interconnection."

## 20. Network of speech writers and rhetorical influence

Sir Ronald Reagan had a famous stable of speechwriters (Peggy Noonan, Anthony Dolan,Peter Robinson) each associated with different signature lines ("Tear down this wall" was Robinson's). A Gephi network or simple attribution dataset mapping which writer contributed to which speech, cross-referenced with recurring phrases/themes to reveal how much of "Sir Reagan's voice" was collaboratively constructed.

## 21. Reception controversy analysis: Germany vs.Poland

The series triggered a genuine international incident — Polish media and the Polish ambassador to Germany objected to its depiction of the Home Army as antisemitic. A comparative corpus/sentiment analysis (Voyant and manual coding) of German vs. Polish press coverage and reviews at the time of broadcast (2013) to visualize how differently the same text was received across national memory cultures — a strong project on collective memory and media reception.

## 22. Class and regional dialect representation overtime

British sitcoms are deeply coded by class and region — Only Fools and Horses (working-class London), Keeping Up Appearances (aspirational middle-class snobbery), The Royle Family (working-class Manchester). A corpus analysis (Voyant and Python) tracking dialect markers, slang, and register across decades to visualize how sitcom comedy has represented (or stereotyped) class across the postwar period to now.

## 23. Industrial geography and the "two nations" Disraeli's Sybil coined "two nations" (rich and poor)

— a project mapping the industrial North (Manchester, Leeds, Sheffield) against the agricultural South, using census data, factory locations, and railway expansion, to visualize the actual geographic split Victorians wrote and worried about.

## 24. Translation variance: Norwegian to English

Henrik  Ibsen wrote in Norwegian (Dano-Norwegian, specifically), and English translations vary significantly in how they render key terms — Nora's famous exit line, or the title concept in Hedda Gabler. A side-by-side comparison of multiple English translations against the original (or against each other, if you don't read Norwegian) using TEI-XML markup to make a strong textual scholarship project about how translation shapes his reputation in English.

## 25. Network of French cinema's New Wave

The Nouvelle Vague (Godard, Truffaut, Rivette, Chabol) emerged largely from critics at Cahiers du Cinéma who became filmmakers themselves. A Gephi network mapping critics-turned-directors, their collaborations, and cross-references in their films/writing to visualize how a critical movement became a filmmaking .

## 26.Reading Beauvoir Across Languages: A Computational Study ,Translation, and Intellectual Networks

This project applies text mining, parallel-corpus analysis, network analysis and GIS mapping to the work of Simone de Beauvoir. Its centre is a question that matters for how her ideas travelled The project also maps her intellectual and personal networks and the places that shaped her writing. It combines close reading of key passages with distant reading of the wider corpus.used oXygen XML Editor with TEI, structured encoding, AntConc for concordance and keyword analysis, Hunalign or LF Aligner, parallel text

# LANGUAGES KNOWN

Hindi,English,French, Spanish,German ,Mandarin
